

The Difference Between Norgren Excelon & Norgren Olympian Filter Regulators

It is highly important that your application has a compatible, fully functioning filter regulator. When air leaves a compressor it is wet, dirty and hot. This can badly damage and diminish the life of downstream equipment, therefore the air must be filtered and regulated to save time, work and expense. Filters such as the **Norgren Excelon or Olympian** can provide an application with outstanding water and particulate removal, and accurate control of downstream pressure, but which one is best for you?

Should you choose the Norgren Excelon or Olympian?

The Excelon and Olympian both operate at the same pressure (0,3-10 bar) and inevitably do the same job. However, there are **features of Norgren Excelon** that are different to the Olympian, this is why it is best for you fully understand the characteristics of the filter regulator before you buy.

- **B64G Series** – Olympian Plus General-Purpose Filter/Regulator- The B64G Series Norgren Filter Regulator is ideal for the control of pressure in compressed air applications. It can be installed as a single unit but is also compatible with other models in the Norgren Olympian Plus Range, such as the **L64 Series Lubricator** and **V64H Pressure Relief Valve**. It can be ordered with either a manual or automatic drain, has a range of filtration levels and can be supplied with a wide range of accessories such as **pressure gauges** and mounting brackets. This filter offers high-efficiency water removal, great regulation characteristics and filter elements of 5, 25 or 40 microns.
